Summary

Backend developer building reliable and robust backend services and high-performance Backend APIs for E-commerce and Logistics platforms. Proficient in Python and PostgreSQL with an emphasis on system stability and developer experience. Proven ability to build scalable data pipelines and enforce unit testing standards in startup environments while scaling internal tools and shared platform systems.

Work Experience

Software Development Intern *July 2026 – August 2026*
MOIZTECHHUB

- Enforced system security by implementing JWT authentication and workspace-scoped Role-Based Access Control (RBAC), ensuring secure data isolation for multi-tenant users.
- Built and designed the TaskFlow API, an enterprise-grade multi-tenant REST API focused on cloud computing principles and high-availability.
- Translated complex software requirements into modular REST API designs, delivering scalable features within specified timelines using GitHub Copilot.
- Designed automated unit testing suites using Pytest to ensure system stability and high code coverage for backend services.

Backend Trainee *August 2025 – December 2025*
ENIGMATIX, BAHAWALPUR, PAKISTAN

- Designed and optimized relational database schemas in PostgreSQL and SQL Server to support large-scale enterprise data pipelines.
- Built high-performance REST APIs and backend services, managing complex HTTP request lifecycles for high-traffic production environments.
- Translated business needs into technical specifications for backend integrations with modern frontend frameworks like React and Angular.
- Enforced ETL pipelines and database modeling standards to maintain system reliability and improve reporting tool accuracy.

Business Development *March 2025 – July 2025*
WEBXMETA, BAHAWALPUR, PAKISTAN

- Translated client communication and lead generation strategies into enterprise-level software requirements for technical development teams.
- Designed functional requirements for cloud-based platforms and Logistics software, reducing friction in software delivery and feature scoping.
- Enforced agile ceremonies and sprint planning to improve developer experience and ensure technical goals aligned with business objectives.

- Built internal tools and documentation to optimize the delivery of human resources technology solutions to external stakeholders.

Education

Bachelor of Science in Information Technology (BS IT) in Information Technology Present
THE ISLAMIA UNIVERSITY OF BAHAWALPUR (IUB), BAHAWALPUR, PAKISTAN

Additional Skills

Backend & Languages: Python, PostgreSQL, SQL, Django, FastAPI

Platforms & DevOps: Docker, Linux, Redis, Postman, Git, GitHub Copilot

Engineering & Architecture: Backend APIs, Data pipelines, Unit testing, ETL pipelines, Event-driven architecture, Microservices, REST APIs, JWT Authentication, RBAC

Methodologies & Industries: Agile, Scrum, CI/CD, E-commerce, Logistics, Platform engineering, Human Resources Technology

Certifications

- Google AI
- Google IT Automation with Python Specialization
- Google AI Essentials

Projects

Event Booking & Ticketing API
Architecting a concurrency-safe event reservation system engineered to eliminate race conditions and double-booking using Redis distributed locks and PostgreSQL row-level transactions (FOR UPDATE). Implemented robust security features including Role-Based Access Control (Admin/Seller/Buyer), account lockout protection against brute-force attacks, and secure JWT refresh token rotation.

Multi-Tenant Project Management API
Developed a multi-tenant task and project management REST API with Redis layer caching for high-frequency queries and per-tenant rate limiting. Established automated testing suites using Pytest and Postman; managed database versioning and seamless schema migrations via Alembic.
